

# UNESCO World Heritage Sites Analysis

## Professional Project Documentation

This document summarizes the project objectives, brainstorming, analysis, dashboard insights, and conclusions. The structure is inspired by a professional brainstorming and idea prioritization workflow.

## Project Objective

Analyze UNESCO World Heritage Sites to identify category distribution, country-wise concentration, yearly inscription trends, forecasting, and endangered heritage sites using Tableau.

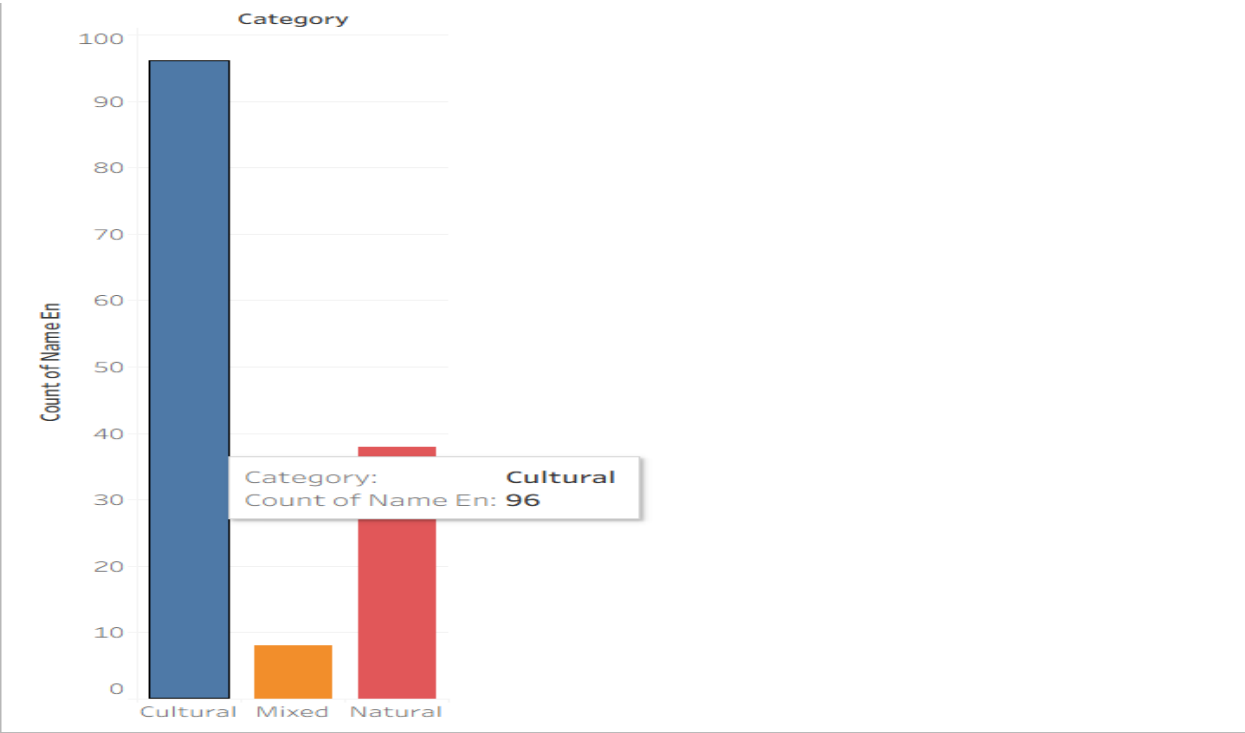

## Brainstorming & Idea Prioritization

Identified key questions: Which countries have the most heritage sites? What is the category distribution? How have inscriptions changed over time? Which sites are endangered? Which visualizations best communicate these insights?

## Dashboard Insights

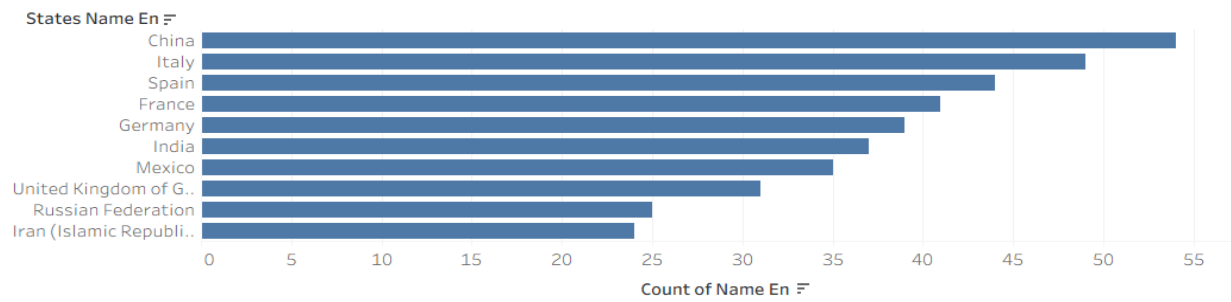

The dashboard includes category analysis, country analysis, yearly trend, forecasting, and top danger sites.

### Category Analysis

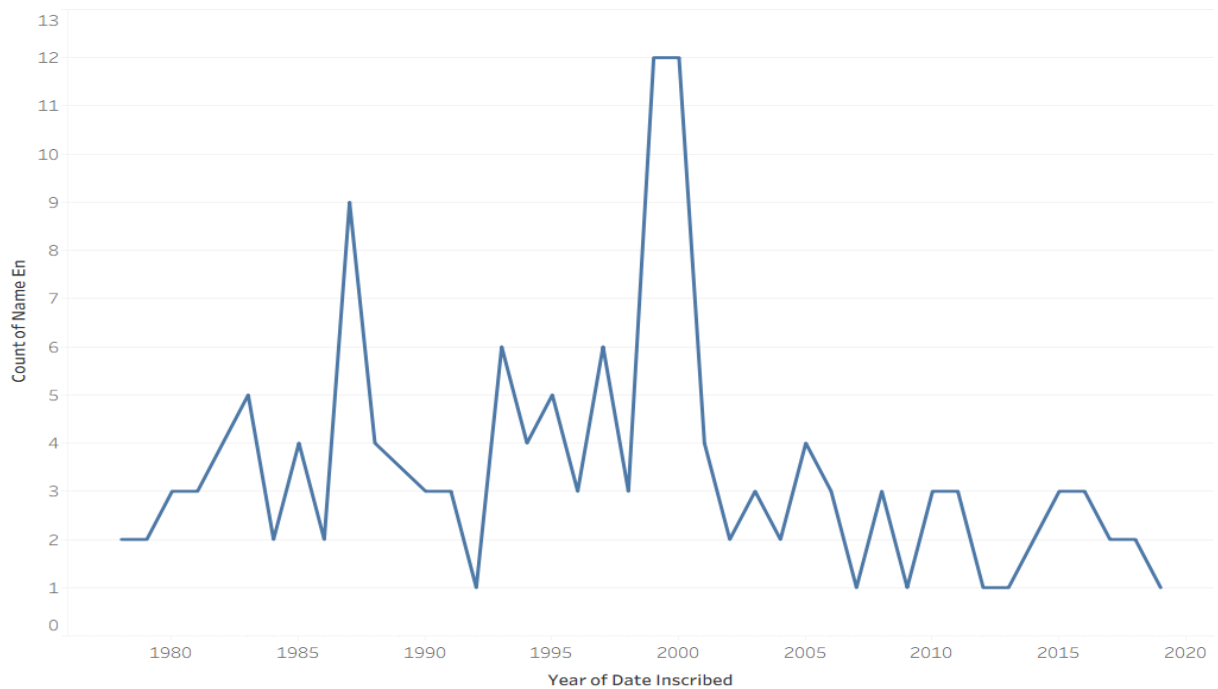

### Country Analysis

## Country Analysis

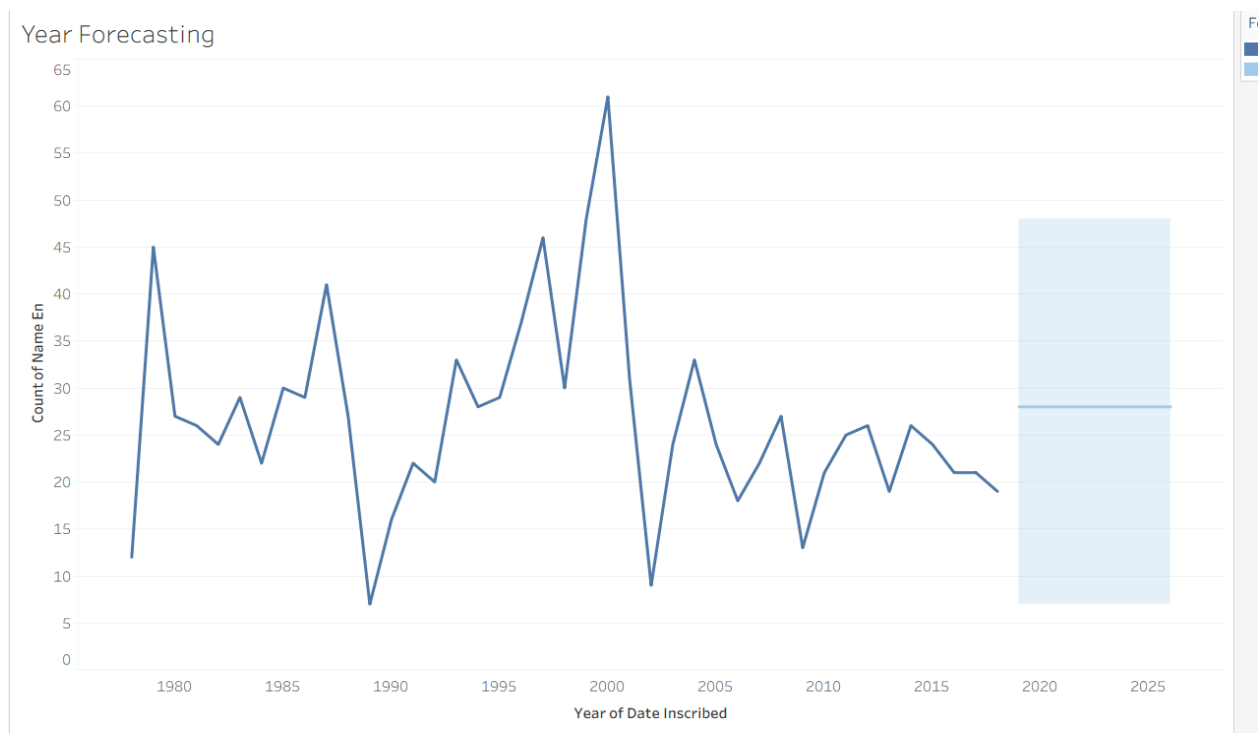

## Yearly Trend

UNESCO World Heritage Sites by Year

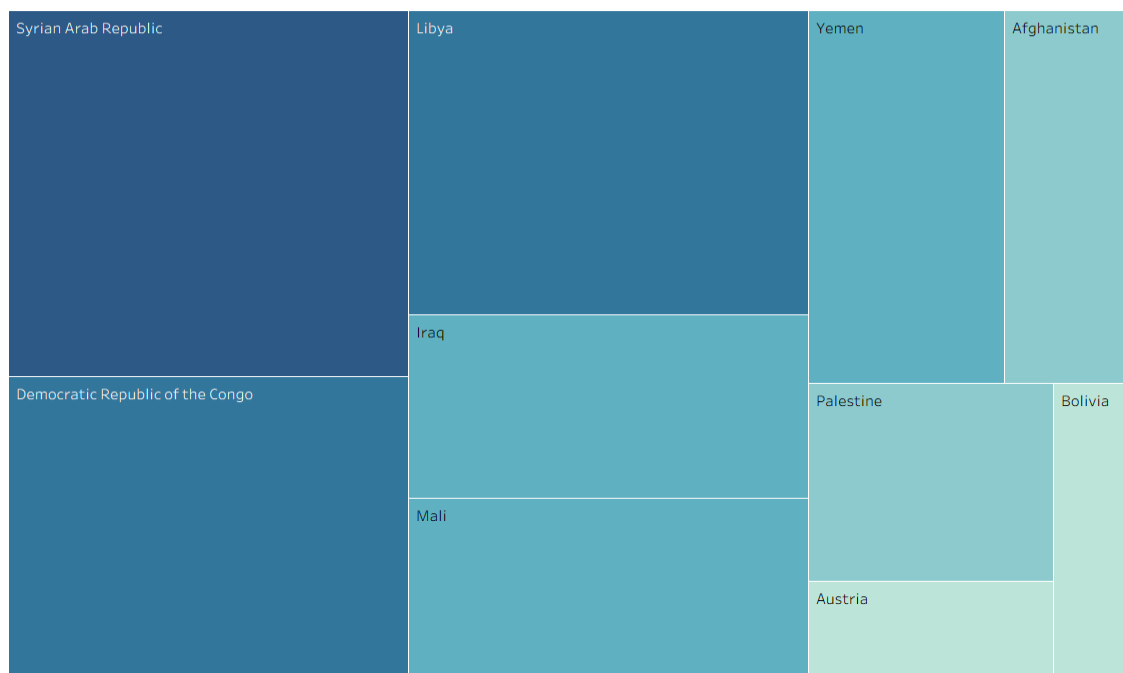

## Forecasting

## Top 10 Danger Sites

Top 10 Danger Sites

## Conclusion

The analysis reveals that Cultural heritage dominates UNESCO listings, China and Italy lead in site count, inscription activity peaked around 1999–2000, future registrations are expected to remain relatively stable, and several countries contain a higher concentration of endangered heritage sites.
